

GPS Installation Automation System

User Step-by-Step Guide (All Roles)

1) What this system does

The application manages GPS installation requests from creation to vendor execution using role-based dashboards: - FO (Field Operator) - RH (Regional Head) - Payment Team - Vendor Coordinator - Admin (analytics)

2) Sign in or register

Step 1: Open the app

- Go to the application URL.
- You land on the Login page.

Step 2: Login (existing user)

- Enter email and password.
- Click **Login**.
- You are auto-redirected to your role dashboard.

Step 3: Register (new user)

- Switch to **Register** mode.
- Enter email + password (minimum 6 chars).
- Select role (FO, RH, PAYMENT, VENDOR).
- Click **Send OTP**.
- Enter OTP from email.
- Click **Register**.

| Note: Admin users are protected by role; admin route is `/admin`.

3) End-to-end request lifecycle (business view)

Single Request Path

1. FO creates request.
2. RH reviews (approve/reject).
3. Payment reviews (approve/reject).
4. Vendor coordinator notifies vendor.
5. Request completes.

Bulk Request Path

1. FO creates multi-vehicle request.
 2. RH and Payment perform compliance/finance actions with bulk logic.
 3. Vendor coordinator processes vendor notification/export.
 4. FO receives bulk status notifications after vendor action.
-

4) Statuses you will see

Common statuses: - PARALLEL_REVIEW - VENDOR_COORDINATION - FO_CREATED - PAYMENT_PENDING - PAYMENT_APPROVED - SERVICE_INITIATED - COMPLETED - HALTED - CANCELLED

5) Role responsibilities

- **FO:** Create requests, manage own request list, cancel request, remove vehicles (bulk stage rules apply).
 - **RH:** Compliance review, approve/reject single and bulk requests.
 - **Payment:** Budget/cost review, approve/reject at request or vehicle-level flows.
 - **Vendor Coordinator:** Notify vendor, send bulk notifications, export data, trigger FO notifications.
 - **Admin:** View real-time analytics summary.
-

6) Common user mistakes and fixes

- **Cannot approve due to status:** Request is in a stage where your action is not allowed.
 - **OTP failure:** Check SMTP setup / email availability.
 - **Missing role redirect:** Ensure user role is present in Firestore `users` collection.
 - **Bulk validation errors:** Ensure vehicles satisfy same-location/client constraints where required by workflow.
-

7) Best-practice usage checklist

- Keep FO request data complete (vehicle details, LPO/LTPOC details).
- Use rejection reason whenever rejecting.
- Review audit/history before making final approvals.
- Use dashboard filters before bulk actions.
- Track final completion/notification status before closing operations.
