

FO Dashboard Guide

Field Operator (FO) - Step-by-Step

1) Dashboard purpose

The FO dashboard is used to create and track installation requests and manage pre-approval updates.

2) Create a request

1. Open FO dashboard.
2. Use request form to enter request details.
3. Add vehicle and LTPOC/driver details.
4. Submit request.
5. Verify request appears in **My Requests** table.

3) Search and monitor requests

- Use search box to find by request ID or client name.
- Review status badge and created date.
- Use **View** to inspect request details and audit log.

4) Cancel flow

A) Cancel entire request

- Allowed at early workflow stages (PARALLEL_REVIEW / FO_CREATED contexts).
- Click **Cancel**, confirm action.

B) Remove one vehicle from bulk request

- Open cancel options.
- Select vehicle.
- Remove selected vehicle.
- If only one vehicle remains, cancel entire request instead.

5) Status labels FO sees

FO table maps workflow status into user-readable labels such as: - Pending Payment Approval - Pending Vendor Action - Pending FO Notification - FO Notified - Rejected - Cancelled

6) FO operational do/don't

- Do verify all phone fields are valid 10 digits before submit.
- Do review details before cancellation.
- Don't expect cancellation/removal at locked workflow stages.
- Don't submit partial bulk data.

7) Troubleshooting

- **No requests visible:** Confirm login role = FO and records `createdBy` your UID.
- **Cancel blocked:** Request stage already moved forward.
- **Data mismatch in view modal:** Refresh and re-check latest real-time state.
