

RH Dashboard Guide

Regional Head (RH) - Step-by-Step

1) Dashboard purpose

RH performs compliance review for all FO requests and can perform individual or bulk actions.

2) Find requests quickly

1. Open RH dashboard.
2. Use search by request ID/client/city.
3. Apply filters: city, client, date.
4. Open a request from table for detail review.

3) Review and approve a single request

1. Open request modal.
2. Validate request data and history.
3. Click approve action.
4. Confirm success toast and status update.

4) Reject a single request

1. Open request.
2. Click reject.
3. Enter mandatory rejection reason.
4. Submit rejection.

5) Bulk approval flow

1. Select multiple eligible requests.
2. Trigger bulk approve action.
3. System skips ineligible requests and processes valid ones.
4. Validate counts and status updates after operation.

6) RH workflow constraints

- RH action is blocked when request state is not allowed.
- Single request approvals are allowed in specific workflow states (PARALLEL_REVIEW, VENDOR_COORDINATION, COMPLETED behavior supported in compliance flow).
- Bulk actions use dedicated bulk workflow logic.

7) Best practices

- Always check prior actions in history.
- Add clear rejection reasons.
- Use filters before bulk operations.
- Recheck if Payment already acted to avoid stale assumptions.
