

Payment Dashboard Guide

Payment Team - Step-by-Step

1) Dashboard purpose

Payment dashboard validates service cost and budget readiness, then approves/rejects requests (including bulk/vehicle-level behavior).

2) Filter and prepare review queue

1. Open Payment dashboard.
2. Use search for request/client/city values.
3. Apply date range and city filters.
4. Apply action filter: ALL / APPROVED / NOT_APPROVED.

3) Review request details

- Open request modal.
- Validate service type and service cost.
- Review vehicle details and LTPOC/LPO data.
- Check history before action.

4) Approve flow

1. Select single request row or eligible rows.
2. Approve action.
3. Confirm status movement to next stage (VENDOR_COORDINATION for single path / bulk progression states).

5) Reject flow

1. Choose request or target vehicle row.
2. Click reject.
3. Enter mandatory rejection reason.
4. Submit and verify rejection status.

6) Bulk and row-level behavior

- Dashboard supports operational table rows from request + vehicle data.
- Per-row status includes approved/rejected/action-taken flags.
- Rejection reason resolution may come from row, request field, or history notes.

7) Best practices

- Validate service type normalization (FleetX/WheelsEye).
- Ensure every rejection has a clear reason.
- Use filters before high-volume actions.
- Confirm post-action status labels to avoid duplicate handling.
